

## UNIVERSIDADE DA BEIRA INTERIOR Faculdade de Engenharia | Departamento de Informática

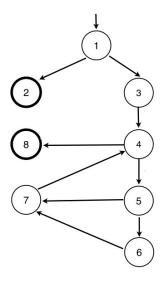

## Qualidade de Software - 2019/20

- 1. Tendo em conta o grafo à direita identifique:
  - 1.1. TR(NC)
  - 1.2. TR(EC)
  - 1.3. Identifique *test paths* que satisfaçam NC e não EC
  - 1.4. Identifique test paths que satisfaçam EC
  - 1.5. Será possível satisfazer EC apenas com *test* paths que não tenham ciclos?

- 2. Tendo em conta o grafo à direita identifique:
  - 1.1. TR(NC)
  - 1.2. TR(EC)
  - 1.3. TR(EPC)
  - 1.3. Identifique *test paths* que satisfaçam NC e não EC
  - 1.4. Identifique test paths que satisfaçam EC

- 3. Tendo em conta o seguinte código fonte:
  - 3.1. Desenhe o CFG da funçao isPalindrome
  - 3.2. Identifique TR(NC), TR(EC), TR(EPC), TR(PPC)
  - 3.3. Identifique, se possivel, casos de teste que satisfaçam:
    - 3.1.1. NC mas não EC
    - 3.1.2. EC mas não EPC
    - 3.1.2. EPC

```
public static boolean isPalindrome(String s) {
   if (s == null)
        throw new NullPointerException();
   int        left = 0;
   int        right = s.length() - 1;
   boolean result = true;
   while (left < right && result == true) {
        if (s.charAt(left) != s.charAt(right)) {
            result = false;
        }
        left++;
        right--;
    }
   return result;
}</pre>
```

- 4. Tendo em conta o seguinte código fonte:
  - 4.1. Desenhe o CFG da função max
  - 4.2. Determine o diversos def/uses
  - 4.3. Determine os du-paths

```
public static int max(int[] v) {
   if (v == null || v.length == 0)
     throw new IllegalArgumentException();
   int max = v[0];
   int n = v.length;
   for (int i = 1; i < n; i++) {
     if (v[i] > max) {
       max = v[i];
     }
   }
   return max;
}
```

5. Para cada um dos grafos responda ás seguintes questões:

```
Graph I.
                                                                                                                                                                                                                     Graph II.
